## Digital Heat FX Print Optimizer: Viewing Raw Data

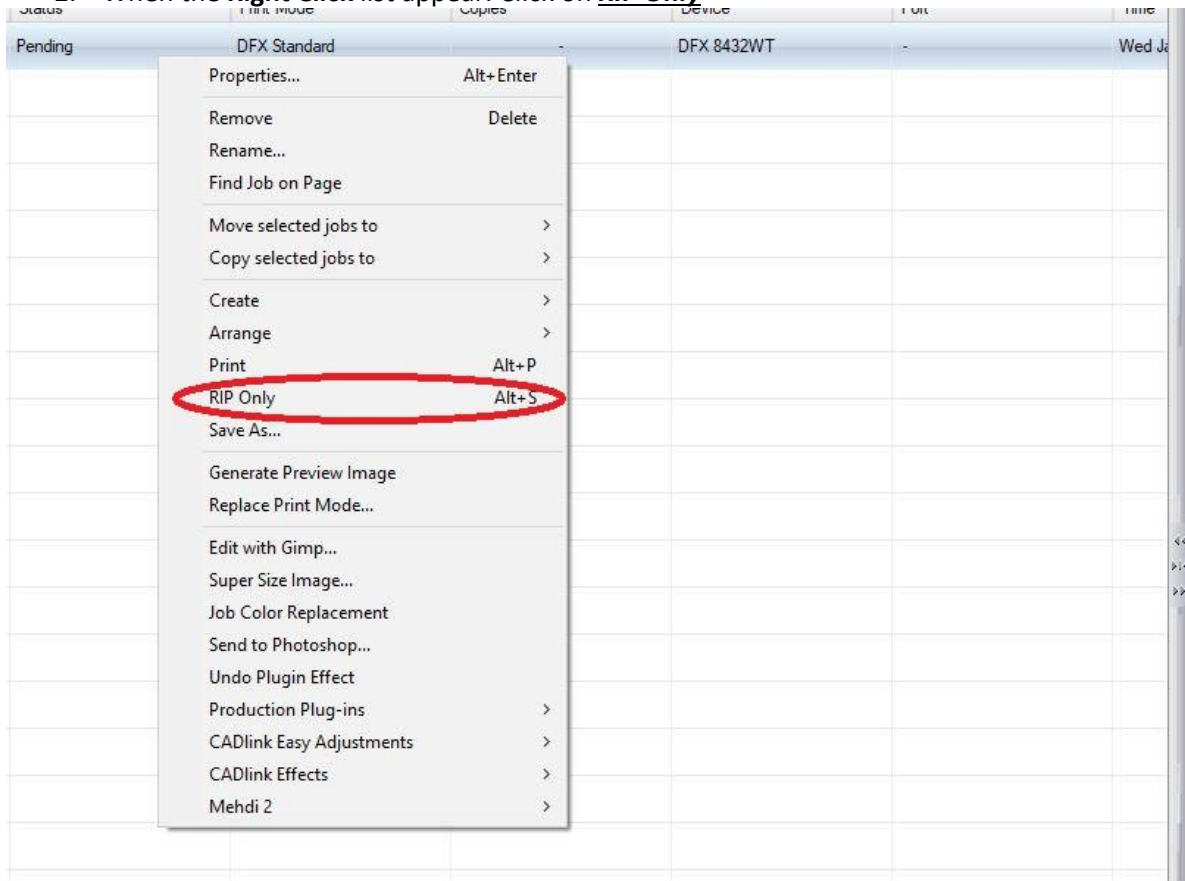

---

This can help to check to see how the image can look before printing.

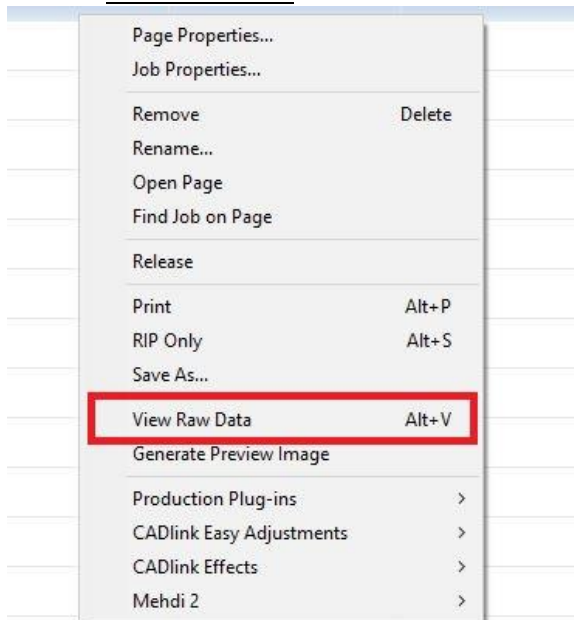

1. Highlight the design that you will like to view. *The “Blue” color means that it is Highlighted.*  
**\*Right Click** on the highlighted design.

2. When the **Right Click** list appear. Click on ***RIP Only***

3. Once the design has been "*Ripped*". **Right Click** again on the highlighted design. Click on ***View Raw Data***

You will be in the View Raw Data Screen. This will give you a “rough” visual of how the image will print.

**TIPS:**

To see where the colors are going to lay down or if the image is still carrying a background.

Click on “View All Colors As Black”

This will turn all the colors Black and will allow to get a better visual of data that the printer is going to see.
