

# Printing Oversized Graphics

PRODUCTS USED  
DFX Print Optimizer

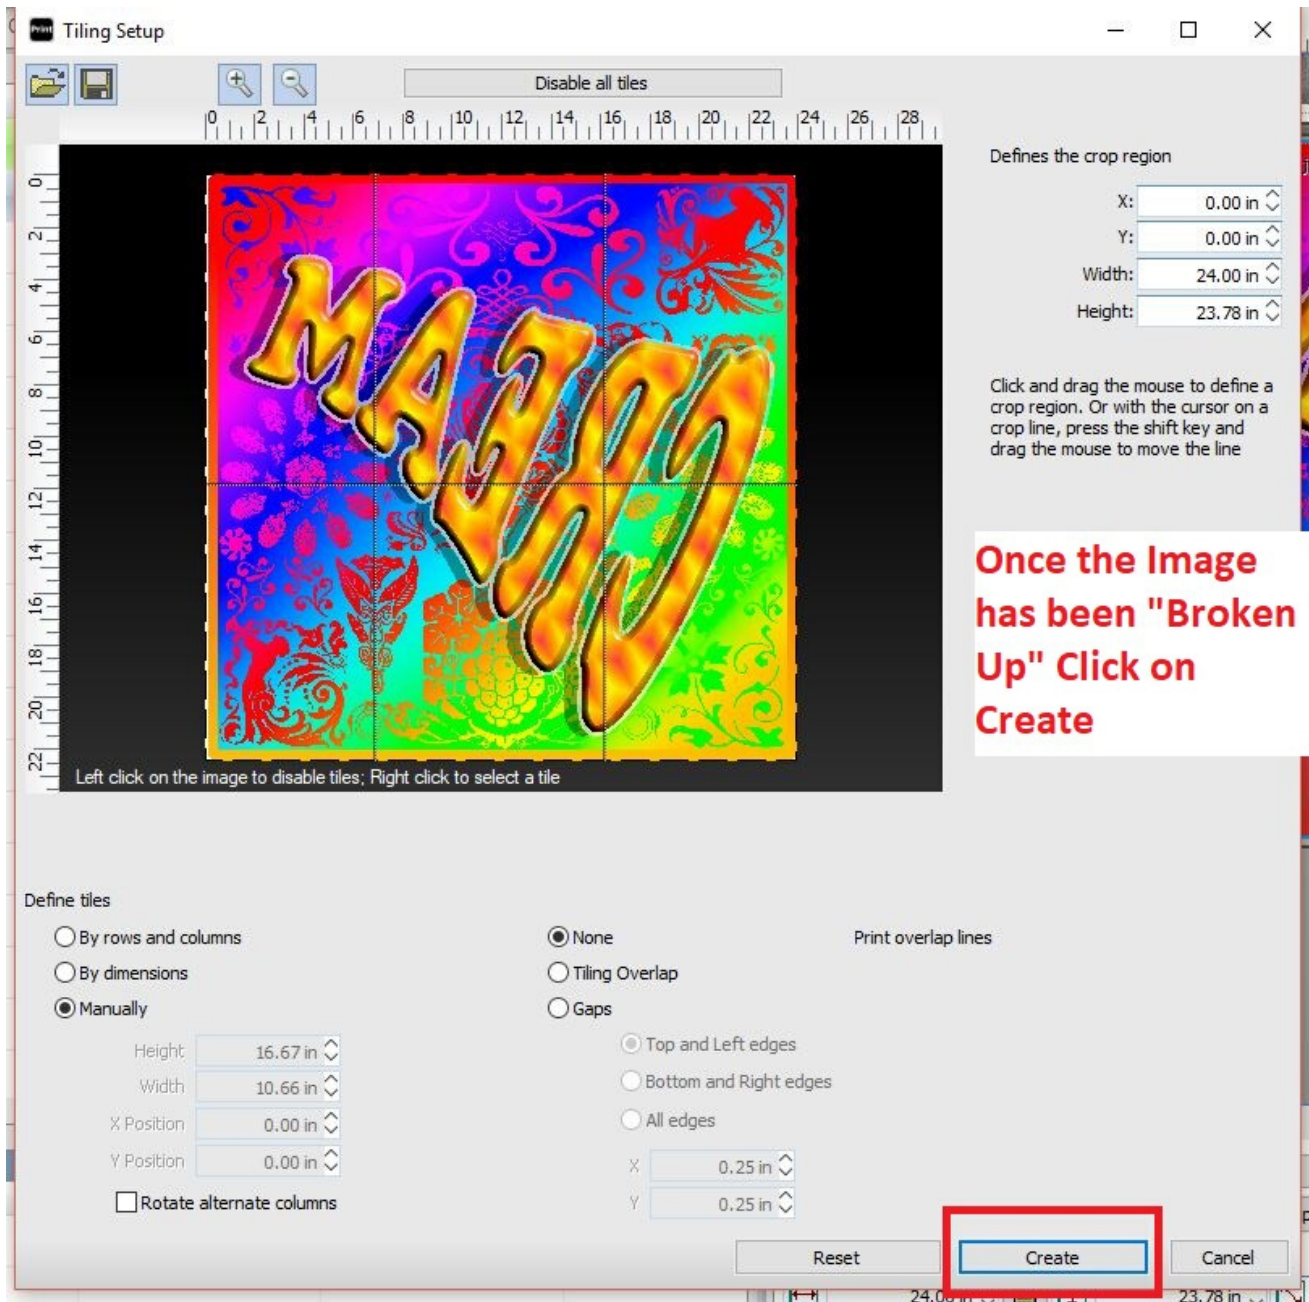

For DFX Print Optimizer

Printing a graphic that is larger than the EZ Peel paper size is possible in the Print Optimizer software. Here's how:

1. Open the Print Optimizer software and select the Queue and Print Mode you want to use. Then, import the graphic as normal.
2. Once the graphic is imported into the software, use the sizing options at the bottom of the window to set the size you want your graphic to be. Once it is resized to your liking, click on the "Crop" button.

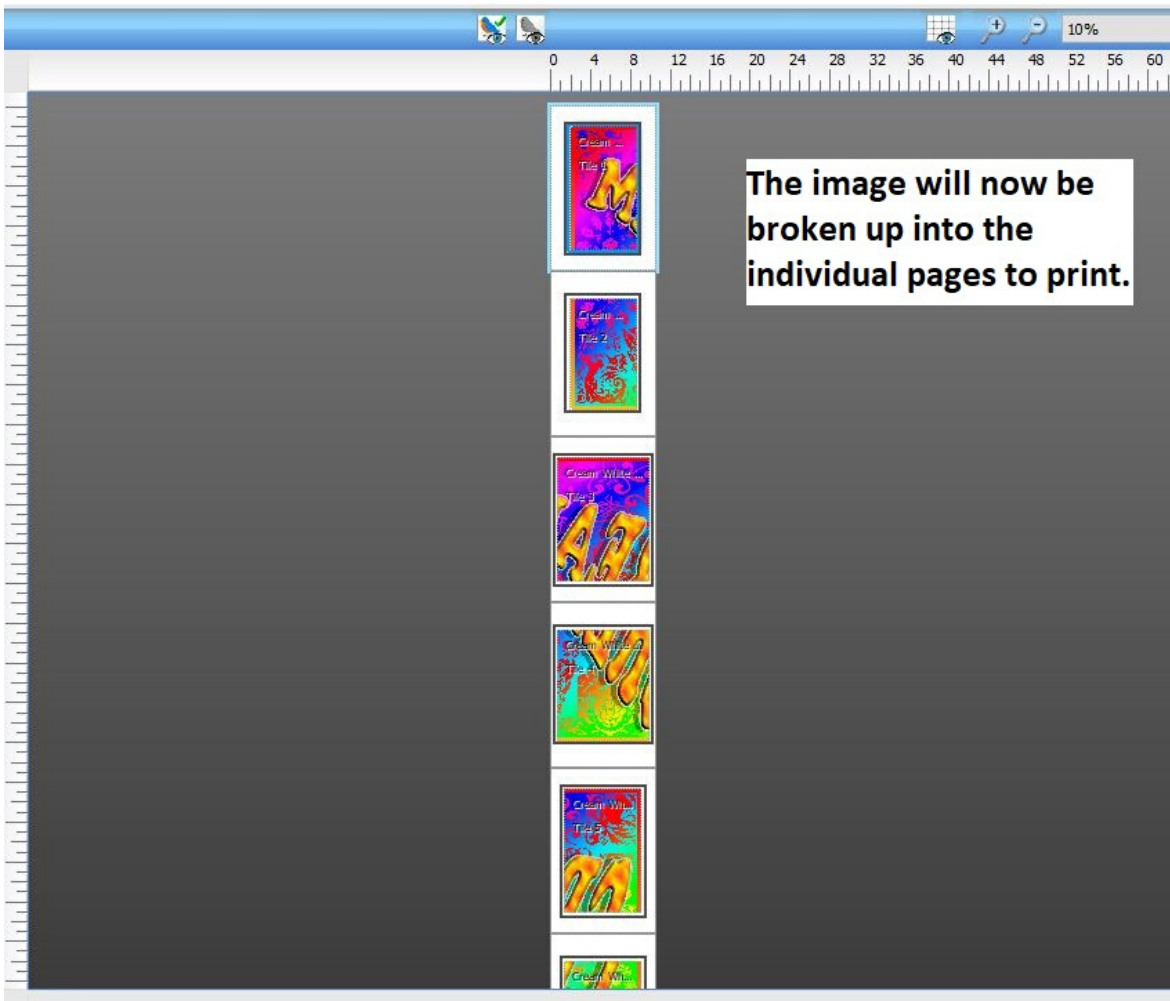

3. After clicking the "Crop" button, the Tiling Setup window will appear. This window will show where the graphic will be broken up and split, allowing the graphic to be printed using the EZ Peel paper. Once you look at the sections of the graphic and how it will be broken up, click on "Create" at the bottom of the window.

4. After clicking on "Create", you will now be able to see all the pages that will be printed out in the size that you initially chose in Step 2. If there is room, you can gang print sections together on one page so you are not wasting space on the EZ Peel paper.

5. Click print and perform the marry process as normal. Once the sections have been married, you can then apply one section at a time to the substrate.
